Automated Network Request Management in
ServiceNow
ServiceNow

NAME: Gagguturu Sufiya
College: Sanskrithi School Of Engineering
ServiceNow (SmartInternz)

Project overview

The Automated Network Request Management in ServiceNow project focuses on simplifying and accelerating the handling of network-related service requests. By leveraging ServiceNow's Service Catalog, workflows, and automation capabilities, the solution reduces manual bottlenecks and ensures requests are processed efficiently.

End users can easily submit network requests through a self-service portal, while automated routing, approvals, task assignments, and notifications streamline the fulfillment process. Where applicable, integration with network automation tools can support end-to-end execution with minimal human intervention.

The project helps achieve:

- Faster request processing
- Reduced manual effort
- Improved SLA compliance
- Automated approvals and task assignments
- Better transparency for users and IT teams
- Real-time request status and notifications

This project is designed to provide a faster, more reliable, and transparent approach to managing network service requests in ServiceNow.

7. Conclusion

Introduction

Modern enterprises rely heavily on robust and efficient network services to support day-to-day business operations. As organizations grow, the demand for network-related requests, such as **access provisioning, configuration changes, and connectivity support**, also increases. Traditional manual request handling often leads to delays, errors, and limited visibility, which can affect productivity and user satisfaction.

The **Automated Network Request Management in ServiceNow** project introduces a streamlined solution that leverages ServiceNow's **workflow engine, Service Catalog, and automation features**. End users can submit requests through a self-service portal, while automated approvals, task assignments, and notifications ensure faster, more accurate, and transparent request management.

This approach enhances the user experience while helping IT teams reduce repetitive tasks, improve **SLA compliance**, and focus on strategic, high-value activities.

Project Objectives

The main objective of the **Automated Network Request Management in ServiceNow** project is to design and implement a streamlined solution for managing network-related service requests within ServiceNow.

The project aims to:

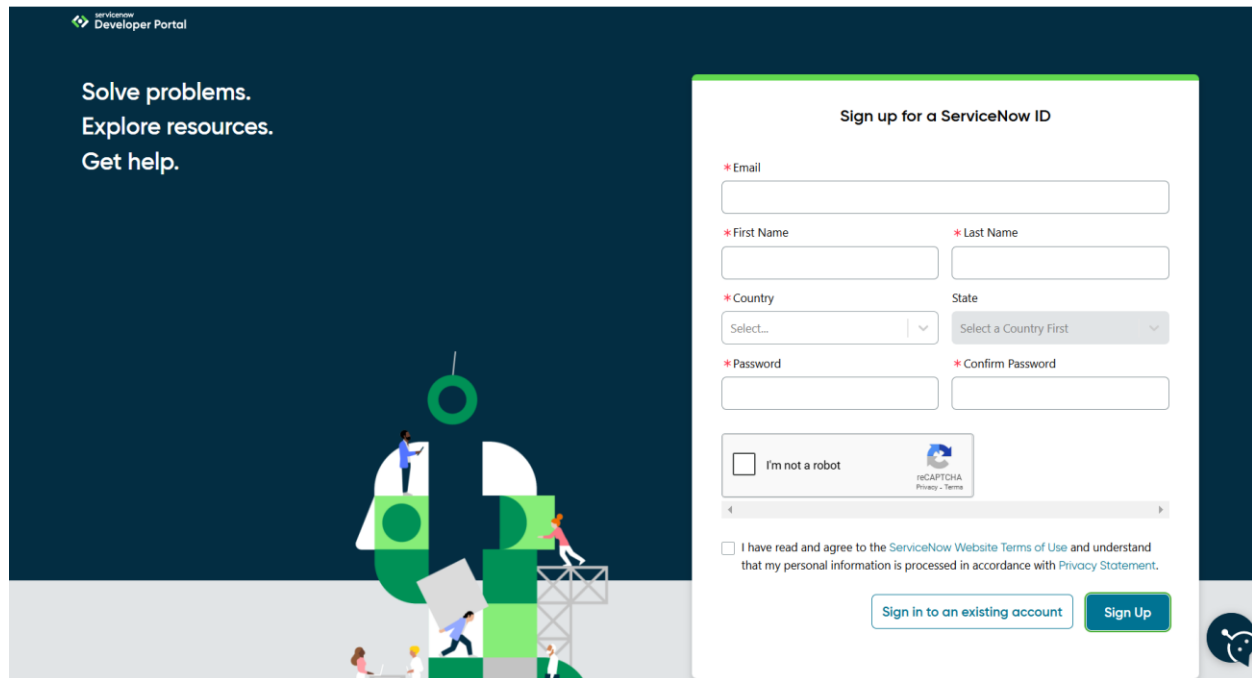

- Enable end users to submit network service requests through a **user-friendly self-service portal**.
- Capture and validate the required request information.
- Automate **approval processes** based on the request type and requirements.
- Automatically route requests for fulfillment.
- Trigger **notifications and task assignments** after request submission.
- Create and update network-related records automatically.
- Reduce manual intervention and processing delays.
- Improve **SLA compliance, request transparency, and service efficiency**.

Key Features

- **Custom Service Catalog:** Provides a dedicated catalog for common network-related service requests.
- **Dynamic Forms:** Captures relevant request details using configurable catalog variables.
- **Automated Approval Workflows:** Automatically manages approvals based on the request type and sensitivity.
- **Network Automation Integration:** Supports optional integration with infrastructure management or orchestration tools.
- **Real-Time Status Updates:** Provides status updates and notifications to requesters and technicians.
- **Reporting and Analytics:** Provides information about request volume, resolution time, and SLA adherence.

ServiceNow Developer Setup:

To develop and implement the project, a **ServiceNow Developer Account** and **Personal Developer Instance (PDI)** are required.

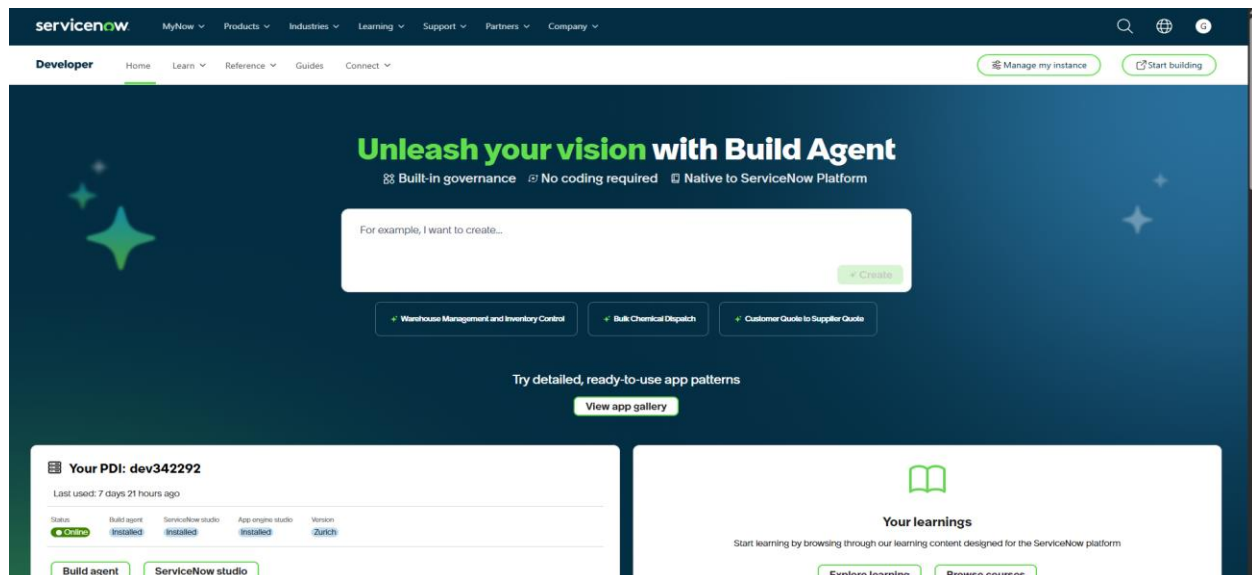

The screenshot shows the ServiceNow Developer Portal sign-up page. On the left, there is a dark blue background with the text "Solve problems. Explore resources. Get help." and an illustration of people working on a large green and white puzzle. On the right, there is a white sign-up form titled "Sign up for a ServiceNow ID". The form includes fields for Email, First Name, Last Name, Country (a dropdown menu), State (a dropdown menu), Password, and Confirm Password. There is also a checkbox for "I'm not a robot" with a reCAPTCHA logo. At the bottom of the form, there is a checkbox for "I have read and agree to the ServiceNow Website Terms of Use and understand that my personal information is processed in accordance with Privacy Statement." and two buttons: "Sign in to an existing account" and "Sign Up".

Steps to Create a Developer Account

1. Go to the **ServiceNow Developer Portal**:
<https://developer.servicenow.com/dev.do>
2. Sign up for a **free developer account** and provide the required details.
3. After registration, a **verification email** will be sent to the registered email address.
4. Verify your email address. After successful verification, the **ServiceNow Developer Portal Home Page** will be available.
5. Click **Start Building**. This provides access to options for requesting a **Personal Developer Instance (PDI)** or using **App Engine Studio** and other development tools.
6. Use the **Profile Icon** in the top-right corner to:
 - Manage your account
 - Request instances
 - Check your developer profile

The ServiceNow Developer environment provides the platform required to build and configure the application, tables, service catalog items, and workflows used in this project.

Project Implementation in ServiceNow:

After the instance building is completed, the page will be directed to your creator studio.

A.Creation of table:

- Navigate to: System Definition > Tables.

- Click New to create a new table.
- Fill in Table Information:
- Label: Network Database
- Name: u_network_database
- Click Submit to create the table.

The screenshot shows the ServiceNow 'Table' configuration page for a table named 'Network Database'. The page has a dark blue header with the ServiceNow logo and navigation links like 'All', 'Favorites', and 'Tables'. Below the header, there's a breadcrumb trail 'Table > Network Database' and a toolbar with buttons for 'Delete', 'Update', and 'Delete All Records'. The main form area is divided into two columns. The left column contains fields for 'Label' (Network Database), 'Name' (u_network_database), and 'Extends table' (empty). The right column contains fields for 'Application' (Global), 'Create module' (checked), 'Create mobile module' (checked), 'Add module to menu' (dropdown menu with '-- Create new --'), 'New menu name' (empty), and 'Remote Table' (unchecked). At the bottom, there are tabs for 'Columns', 'Controls', and 'Application Access'.

Creation of table:

- Navigate to: System Definition > Tables.
- Click New to create a new table.
- Fill in Table Information:
- Label: Network Task Table
- Name: u_network_task_table
- Click Submit to create the table.

B. Creation of Approval Request on Network Database Table

Activity 1: Creation of Related List

- Navigate to **System Definition > Relationships**.
- Click **New** to create a new relationship.
- Fill in the following details:

- **Name:** Approval Request
- **Applies to Table :** Network database table
- **Queries from Table :** sys_approvals table.
- **Active:** Make sure it's set to **True**.
- Save the relationship.

servicenow All History : Relationship - Appr... Application ... Update set...

Relationship Approval Request Run Query Diagnostics Update Delete

Name: Approval Request Application: Global

Advanced ☐ Applies to table: Network Database [u_netw...]

Queries from table: Approval [sysapproval_appr...]

This script refines the query in current that will populate the related list. For more information about it, its parameters and control variables, see [the documentation](#). See also the article about the [recommended form of the script](#).

Query with Turn on ECMAScript 2021 (ES12) mode

```

1  (function refineQuery(current, parent) {
2
3      // Add your code here, such as current.addQuery(field, value);
4      current.addQuery('source_table', parent.getTableName());
5      current.addQuery('document_id', parent.sys_id);
6
7  })(current, parent);

```

Run Query Diagnostics Update Delete

Activity1: Creation of service catalog

- Navigate to Application navigator
- Click on All >> search for Service Catalog
- Under Service Catalog>> Maintain items
- Click on New
- Fill the details >> Name– Network Request
- Select Catalog>> Service Catalog

- Select Category>> Network
- Fill the Short Description as Network request Management
- Click on Save.

The screenshot shows the ServiceNow interface for editing a Catalog Item. The top navigation bar includes the ServiceNow logo, 'All', 'Favorites', and a 'Catalog Items' button. A search bar and various utility icons are on the right. Below the navigation bar, the breadcrumb 'Catalog Item Network Request' is shown, followed by action buttons: 'Copy', 'Try It', 'Update', 'Edit in Catalog Builder', and 'Delete'. A blue notification banner states: 'Build and modify items faster with the improved Catalog Builder.' The main form contains several fields: 'Name' (Network Request), 'Application' (Global), 'Catalogs' (Service Catalog), 'Category' (Networks and Connectivity), 'State' (-- None --), 'Checked out' (-- None --), 'Owner' (System Administrator), 'Active' (checked), 'Roles' (empty), and 'Fulfillment automation level' (Unspecified). Below these fields is a tabbed section with 'Item Details' selected. It contains 'Short description' (Network Services Request), 'Description' (with expand/collapse buttons), and 'Meta' (empty). At the bottom of the form are buttons for 'Copy', 'Try It', 'Update', 'Edit in Catalog Builder', and 'Delete'.

Activity 2: Variables Configuration

Scroll down to the Variables related list and click New to create form fields.

- Select Variables type as Single, Multi line text, reference, choices etc as per requirement
- Catalog item– Network Request
- Order–100,200,300,,,
- Question– provide the variable label
- Name–provide the variables name(used for scripting)

- Tooltip– this will appear when cursor overed on the field
- Example text – this will suggest what we need to enter on the field.
- Mandatory, Read-Only– need to configure on demand
- Auto populate– need to select dependent variable, apply dot walking to get selected value.
- Click on Save or Submit.

D.Navigation Flow

- **Procedure:**
- Login to ServiceNow PDI
- Copy the Instance domain ex: <https://dev190678.service-now.com>.
- Paste the URL in the Next tab and add Prefix SP to the URL.
- <https://dev190678.service-now.com/sp>.
- Search for **Network Requests**.
- Fill the required details and click on submit
- New Requests will be generated with request numbers and users will get particular emails on the same.

E. Usability

- In this section just we have to check the Auto population of Variables
- Email—Auto populate
- Phone Number-- Auto populate
- User Name-- Auto populate
- Note: auto-filled based on the logged-in user using reference variables only and for every dependent field need to configure Auto populate Value while creating a variable.

The screenshot shows the ServiceNow 'Network Request' form. A red box highlights the breadcrumb navigation: Home > All Catalogs > Service Catalog > Networks and Connectivity > Network Request. Another red box highlights the 'Network Request' title and the 'Network Services Request' subtitle. A third red box highlights the 'Requester information' section, which includes fields for 'Opened on behalf of' (Abraham Lincoln), 'Phone Number' (99999999), 'Email ID' (abraham.lincoln@example.com), 'User Name' (abraham.lincoln), and a 'Proof of Document' upload button. To the right, there are fields for 'Quantity' (1) and 'Delivery Time' (0 Days), along with buttons for 'Add to Cart', 'Save as Draft', and 'Order Now' (which is also highlighted with a red box). At the bottom, there is a 'Service Details' section with a question: 'Is this a new network connection or a relocation?'.

F. Business Rules

- UI Policies to display additional fields when certain choices are made
- Conditional logic and field dependencies configured within ServiceNow.
- **Catalog UI Policy Configuration**
- Scenario: If user selects types of devices is **Others**, then Please specify field should populate.
- **Procedure**
- Navigate to catalog items
- Open Network Request item
- In related list, we have Catalog UI policy
- Click on New button to configure New UI policy
- Select Applies to as Catalog item
- Select catalog item as Network Request
- Provide short description, if required
- Apply condition>> **types of devices** is **others**

- Click on save, after saving the form will get UI policy actions in the related list
- Click on New button to configure new UI Policy action, and select the variable which we want to display on condition
- Make Visible True as per our requirement
- Update the UI Policy and Test the same on Catalog form

13. Send Mail

- Select action as Send Email
- Select TO: Create Record>>Network Task Table>>Requested for>>Email
- Configure To, CC, BCC as per our requirements(select static/dynamic)
- Provide Subject & Body as shown in the below picture
- Click on done

The screenshot shows a 'Send Email' configuration window. At the top, there's a header bar with a globe icon, the text 'Send Email', and several icons. Below this is the 'Action Properties' section, where the 'Action' is set to 'Send Email'. The 'Action Inputs' section follows, containing fields for 'Target Record' (set to 'Drag and drop record data pill'), 'Table' (set to 'Select a Table'), 'Include Watermark' (checked), '* To' (set to '8 - Create Record > ... > Email'), 'CC', 'BCC', and '* Subject' (set to 'Network Request Resolved'). Below these is a rich text editor for the 'Body'. The editor has a toolbar with bold, italic, text color, background color, bulleted list, numbered list, link, unlink, and table icons. The font is set to 'OpenSans, So...' and the size to '10pt'. The body text reads: 'Hello, Your Network request has been resolved successfully. Request Number: Trigger - Servi... > ... > Num... RITM Number: Trigger ... > ... > Effective nu... Thank you. Network Team'. At the bottom right are 'Delete', 'Cancel', and 'Done' buttons.

Conclusion

The **Automated Network Request Management in ServiceNow** project provides a streamlined, reliable, and user-friendly solution for handling network-related service requests. By automating approvals, routing, and notifications, the system eliminates delays and errors associated with manual processes while offering transparency through real-time updates and reporting. This initiative not only improves SLA compliance and user satisfaction but also optimizes IT operations by reducing repetitive workload and enabling faster fulfillment. Ultimately, it supports the organization's goal of delivering **efficient, high-quality, and responsive network services**, empowering both end users and IT teams.
